

# Energy performance certificate (EPC)

21 TOLLGATE  
BRETTON  
PETERBOROUGH  
PE3 9XA

Energy rating

C

Valid until 19 January 2031

Certificate number

0300-2308-3090-2299-2365

**Property type**

Semi-detached house

**Total floor area**

66 square metres

## Rules on letting this property

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read [guidance for landlords on regulations and exemptions \(https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance\)](https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

## Energy efficiency rating for this property

This property's current energy rating is C. It has the potential to be B.

[See how to improve this property's energy performance.](#)

| Score | Energy rating | Current | Potential |
|-------|---------------|---------|-----------|
| 92+   | A             |         |           |
| 81-91 | B             |         | 88   B    |
| 69-80 | C             | 69   C  |           |
| 55-68 | D             |         |           |
| 39-54 | E             |         |           |
| 21-38 | F             |         |           |
| 1-20  | G             |         |           |

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

The average energy rating and score for a property in England and Wales are D (60).

### Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says 'assumed', it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

| Feature              | Description                                 | Rating  |
|----------------------|---|---------|
| Wall                 | Cavity wall, filled cavity                  | Good    |
| Roof                 | Pitched, 75 mm loft insulation              | Average |
| Window               | Fully double glazed                         | Average |
| Main heating         | Boiler and radiators, mains gas             | Good    |
| Main heating control | Room thermostat only                        | Poor    |
| Hot water            | From main system                            | Good    |
| Lighting             | Low energy lighting in 33% of fixed outlets | Average |
| Floor                | Solid, no insulation (assumed)              | N/A     |
| Secondary heating    | None  | N/A     |

## Primary energy use

The primary energy use for this property per year is 220 kilowatt hours per square metre (kWh/m<sup>2</sup>).

### [What is primary energy use?](#)

## Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO<sub>2</sub>). The energy used for heating, lighting and power in homes produces over a quarter of the UK's CO<sub>2</sub> emissions.

|                                     |                               |
|-------------------------------------|-------------------------------|
| For an average household            | 6 tonnes of CO <sub>2</sub>   |
| This property produces              | 2.6 tonnes of CO <sub>2</sub> |
| This property's potential reduction | 0.9 tonnes of CO <sub>2</sub> |

By making the [recommended changes](#), you could reduce this property's CO<sub>2</sub> emissions by 1.7 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

## How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from C (69) to B (88).

### [What is an energy rating?](#)

## Recommendation 1: Increase loft insulation to 270 mm

Increase loft insulation to 270 mm

Typical installation cost

£100 - £350

Typical yearly saving

£23

Potential rating after carrying out recommendation 1

71 | C

## Recommendation 2: Floor insulation (solid floor)

For insulation (solid floor)

Typical installation cost

£4,000 - £6,000

Typical yearly saving

£34

Potential rating after carrying out recommendations 1 and 2

72 | C

## Recommendation 3: Low energy lighting

Low energy lighting

Typical installation cost

£30

Typical yearly saving

£34

## Potential rating after carrying out recommendations 1 to 3

73 | C

## Recommendation 4: Solar water heating

Solar water heating

Typical installation cost

£4,000 - £6,000

Typical yearly saving

£44

## Potential rating after carrying out recommendations 1 to 4

76 | C

## Recommendation 5: Solar photovoltaic panels, 2.5 kWp

Solar photovoltaic panels

Typical installation cost

£3,500 - £5,500

Typical yearly saving

£350

## Potential rating after carrying out recommendations 1 to 5

88 | B

## Looking for energy improvements

Find out about [energy grants and ways to save energy in your home](https://www.gov.uk/improve-energy-efficiency). (<https://www.gov.uk/improve-energy-efficiency>)

### Estimated energy use and potential savings

Estimated yearly energy cost for this property

£613

Potential saving

£134

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is based on how energy is used by the people living at the property.

e estimated saving is based on making all of the recommendations in [how to improve this property's energy performance](#).

r advice on how to reduce your energy bills visit [Simple Energy Advice \(https://www.simpleenergyadvice.org.uk/\)](https://www.simpleenergyadvice.org.uk/).

## heating use in this property

heating a property usually makes up the majority of energy costs.

### Estimated energy used to heat this property

|               |                     |
|---------------|---------------------|
| Space heating | 6438.0 kWh per year |
|---------------|---------------------|

|               |                     |
|---------------|---------------------|
| Water heating | 2680.0 kWh per year |
|---------------|---------------------|

### Potential energy savings by installing insulation

| Type of insulation | Amount of energy saved |
|--------------------|------------------------|
|--------------------|------------------------|

|                 |                  |
|-----------------|------------------|
| Loft insulation | 542 kWh per year |
|-----------------|------------------|

u might be able to receive [Renewable Heat Incentive payments \(https://www.gov.uk/domestic-renewable-heat-incentive\)](https://www.gov.uk/domestic-renewable-heat-incentive). This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

### Contacting the assessor and accreditation scheme

is EPC was created by a qualified energy assessor.

ou are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

ou are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

reditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
